# Optima V10

## Two-tier bicycle parking system with smart convenience

How do you store as many bikes as possible in a limited space? Meet the efficient Optima V10. This successful and robust bicycle parking system was specially developed to efficiently use the potential of the available square meters.

1

### Parking comfortably on the floor

The gas pressure spring makes the top rack come down lightly and smoothly. It can go far down, which also makes parking just a little easier.

2

### Cleverly saving space

Thanks to the design of the Optima V10 you won't lose bicycle parking spaces when you put multiple systems in a row.

3

### No loss of parking spaces

The two-tier system can easily be linked together, without loss of bicycle parking spaces thanks to the cleverly designed upright.

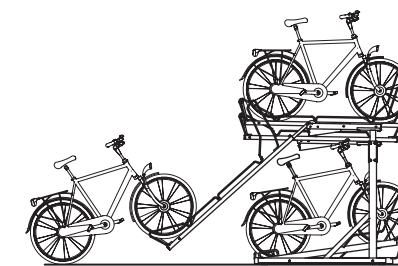

# Material and specifications

# Wherever you are

You might not realise, but VConsyst products are in many public spaces. You can find our iconic waste bins, underground containers, bicycle parking systems, canopies and our streetfurniture all over the Netherlands and abroad.

We want to help you with fitting, innovative solutions for organising public spaces. Solutions that make it easier and safer. But above all: More durable.

VConsyst doesn't only think about today and tomorrow, but also future generations. Wherever you are, now and later.

## Litter bins

Durable litter bins for public spaces.

## Canopies

Open and closed canopies for public spaces and industrial areas.

## Streetfurniture

High quality benches for various locations.

## Underground waste containers

A waste container fitting for your streetscape.

## Bicycle parking systems

From simple bike racks to complex two-tier bicycle parking systems.

## VConsyst Dynamics

The software solution for all of our products.
